

Job Description

Job Role: Data Scientist/Analyst

Duration: Full Time

Job Type: Remote, Full-Time

Experience Level: Mid-Senior level

Timings: 6 PM - 2 AM

About the company

Turing Inc.

United States

Based in Palo Alto, California, Turing aims to unleash the world's untapped human potential. We use AI to source, evaluate, hire, onboard, and manage engineers 100% remotely via a bigger platform that we call the "Talent Cloud". Today, Turing is one of the fastest-growing unicorns, with a valuation of \$1.1B, after raising over \$140M over four rounds of funding. 100+ companies including the likes of Pepsi, Dell, Disney +, and Coinbase have hired Turing developers.

Description

We are actively seeking talented Data Scientists & Analysts proficient in Python to join our ambitious team dedicated to pushing the frontiers of AI technology. This opportunity is tailored for professionals who thrive on developing innovative solutions and aspire to be at the forefront of AI advancements. You will work with companies in the US looking to develop cutting-edge commercial and research AI solutions.

Job Responsibilities:

- Write effective Python code to tackle complex issues, but also use your business sense and analytical abilities to glean valuable insights from public databases
- Communicate clearly with researchers and help the organization in realizing its objectives
- Clearly express the reasoning and logic when writing code in Jupyter notebooks, or other suitable mediums
- Fix bugs in the code and create thorough documentation
- Utilize extensive data analysis skills to develop and respond to important business queries using available datasets (such as those from Kaggle, the UN, the US government, etc.)
- Effectively communicate with the researchers to comprehend the needs and provide the results

Job Requirements:

- Bachelor's/Master's degree in Engineering, Computer Science (or equivalent experience)
- At least 2 years of relevant experience as a data scientist
- 2+ years of data analysis experience and a desire to have a significant impact on the field of artificial intelligence
- 2+ years of experience working with Python programming
- Strong data analytic abilities and business sense are required to draw the appropriate conclusions from the dataset, respond to those conclusions, and clearly convey the key findings
- Excellent problem-solving and analytical skills
- Excellent communication abilities to work with stakeholders and researchers successfully
- Fluent in conversational and written English communication skills •

Required Skill Set :-

Python 2 years, Data Analysis OR Data Science (2 years for any)

Engagement type: Full-Time

Engagement length: Full-Time

Max. notice period: 2 Weeks

Project timezone: UTC-8:00 America/Los_Angeles

Overlap hours: 5 hrs/day
